Symbols

A symbol is formed by:

- starting a character sequence with #

```
#aSymbol  
#ANOTHERSymbol
```

- Sending asSymbol to a string

```
'cat' asSymbol
```

Symbols are created uniquely

Only one instance of a symbol with a given character sequence will exist in the image

The following pointer compare is false

```
'cat' == 'tac' reversed
```

The following pointer compare is true

```
'cat' asSymbol == 'tac' reversed asSymbol
```

perform: aSymbol

Object implements perform: aSymbol

perform: aSymbol

aSymbol must be a unary method name in the receiver
 Execute the unary method in the receiver

perform: aSymbol with: anObject

aSymbol must be an one argument method in the receiver
 Execute the method with anObject as the argument

perform: aSymbol with: arg1 with: arg2

perform: aSymbol with: arg1 with: arg2 with: arg3

perform: aSymbol withArguments: anArray

Examples

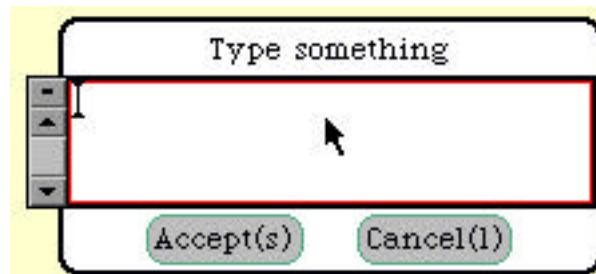

Action	Result
'cat' perform: #reversed	tac
'cat' perform: #at: with: 1	\$c
'cat' perform: 'reversed' asSymbol	'tac'
3 perform: #+ with: 2	5
'smalltalk' perform: #copyFrom:to: with: 6 with: 9	'talk'
'smalltalk' perform: #copyFrom:to: withArguments: #(6 9)	'talk'

Simple Dialog

FillInTheBlankMorph returns

- The string the user entered into the text field
- Empty string returned when user cancels

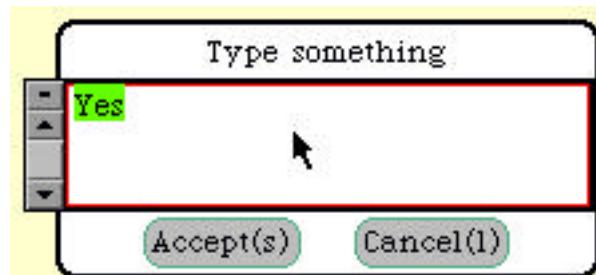

FillInTheBlankMorph request: 'Type something'

FillInTheBlankMorph

request: 'Type something'

initialAnswer: 'Yes'

FillInTheBlankMorph requestPassword: 'Password?'

Popup Menus

Menus have

- Optional Title
- Menu items
- Submenus
- Lines separating items
- Stay up item
- Optional Default target for menu items

Menu Items have

- Display text
- Target

Object to be notified when menu item is selected

- Selector (action)

Methods sent to target when menu item is selected

- Argument(s) to selector

If selector has one or more arguments,
Then must store them with the menu item

Some Menu methods

Instance Creation

MenuMorph new

MenuMorph entitled: 'Popup'

Instance method

add: aDisplayString target: anObject selector: aSymbol

add: aString target: anObject selector: aSymbol argument: anObject

add: aString target: target selector: aSymbol argumentList: array

add: aString subMenu: aMenu.

add: aString action: aSymbol

add: aString selector: aSymbol

add: aString selector: aSymbol argument: anObject

aSymbol is sent to the default target

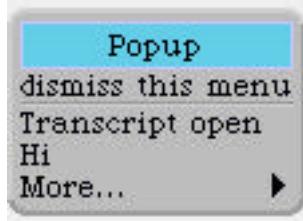

defaultTarget: anObject

position: aPoint

aPoint becomes the upper left corner of the menu

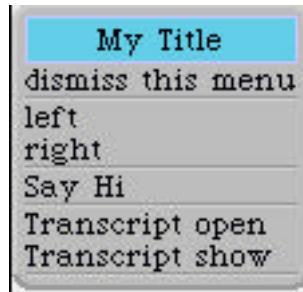

addStayUpItem

Simple Example

```
| menu nestedMenu |
nestedMenu := MenuMorph new.
nestedMenu
    add: 'Bye'
    target: Transcript
    selector: #show:
    argument: 'bye'.
menu := MenuMorph entitled: 'Popup'.
menu addStayUpItem.
menu
    add: "Transcript open"
    target: Transcript
    selector: #open.
menu
    add: 'Hi'
    target: Transcript
    selector: #show:
    argument: 'hi'.
menu
    add: 'More...'
    subMenu: nestedMenu.
menu openInWorld
```

Example with Real Target

```
| menu |
menu := MenuMorph entitled: 'My Title'.
menu
    addStayUpItem;
    defaultTarget: MenuModelExample new.
menu
    add: 'left'
    action: #left.
menu
    add: 'right'
    action: #right.
menu addLine.
menu addLine. "extra lines ignored"
menu
    add: 'Say Hi'
    selector: #displayMessage:
    argument: 'hi'.
menu addLine.
menu
    add: 'Transcript open'
    target: Transcript
    action: #open.
menu
    add: 'Transcript show'
    target: Transcript
    selector: #show:
    argument: 'hi'.
menu addLine.
menu openInWorld
```

MenuModelExample

Object subclass: #MenuModelExample

instanceVariableNames: "

classVariableNames: "

poolDictionaries: "

category: 'Whitney-Examples'

displayMessage: aString

Transcript

show: aString;

cr.! !

left

self displayMessage: 'left called'

right

self displayMessage: 'right called'
