#### **Reading Assignment**

Refactoring: Improving the Design of Existing Code, Fowler, Addison-Wesley, 1999

Jan 26 - Chapters 1 & 2

Jan 31 - Chapters 3 & 4

# Unit Testing

# Testing

#### Johnson's Law

If it is not tested it does not work

The more time between coding and testing

More effort is needed to write tests More effort is needed to find bugs Fewer bugs are found Time is wasted working with buggy code Development time increases Quality decreases

5

# **Unit Testing**

Tests individual code segments

Automated tests

# What wrong with:

Using print statements

Writing driver program in main

Writing small sample programs to run code

Running program and testing it be using it

### We have a QA Team, so why should I write tests?

## When to Write Tests

First write the tests

Then write the code to be tested

Writing tests first saves time

Makes you clear of the interface & functionality of the code

Removes temptation to skip tests

## What to Test

Everything that could possibly break

Test values Inside valid range Outside valid range On the boundary between valid/invalid

GUIs are very hard to test Keep GUI layer very thin Unit test program behind the GUI, not the GUI

# **Common Things Programs Handle Incorrectly**

Adapted with permission from "A Short Catalog of Test Ideas" by Brian Marick,

http://www.testing.com/writings.html

#### Strings

**Empty String** 

#### Collections

Empty Collection Collection with one element Collection with duplicate elements Collections with maximum possible size

#### Numbers

#### Zero

The smallest number Just below the smallest number The largest number Just above the largest number

### XUnit

Free frameworks for Unit testing

SUnit originally written by Kent Beck 1994

JUnit written by Kent Beck & Erich Gamma

Available at: http://www.junit.org/

Ports to many languages at: http://www.xprogramming.com/software.htm

#### **XUnit Versions**

3.x

Old version Works with a versions of Java 4.x Current version 4.8.1 Uses Annotations Requires Java 5 or later

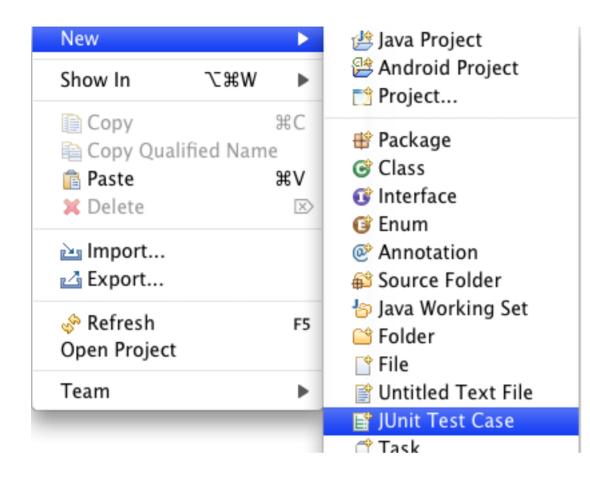

# Simple Class to Test

```
public class Adder {
    private int base;
    public Adder(int value) {
        base = value;
    }
    public int add(int amount) {
        return base + amount;
    }
}
```

}

}

# **Creating Test Case in Eclipse**

## **Creating Test Case in Eclipse**

00	New JUnit Test Case	
JUnit Test Case	default package is discouraged.	E
🔘 New JUnit 3 te	st 💿 New JUnit 4 test	
Source folder:	JUnitExample/src	Browse
Package:	(default	Browse
Name:	TestAdder	
Superclass:	java.lang.Object	Browse
Which method stu	ubs would you like to create?	
	setUpBeforeClass() tearDownAfterClass()	
	setUp() tearDown()	
	constructor	
Do you want to ad	ld comments? (Configure templates and default value her	<u>e</u> )
	Generate comments	
Class under test:	Adder	Browse
?	< Back Next > Cancel	Finish
Ŭ		

Fill in dialog window & create the test cases

# **Test Class**

import static org.junit.Assert.assertEquals; import static org.junit.Assert.assertTrue; import org.junit.Test;

```
public class TestAdder {
```

```
@Test
public void testAdd() {
    Adder example = new Adder(3);
    assertEquals(4, example.add(1));
}
```

```
@Test
public void testAddFail() {
    Adder example = new Adder(3);
    assertTrue(3 == example.add(1));
}
```

}

17

# **Running the Tests**

•	🖭 1 Java Applet
•	2 Java Application
	Ju 3 JUnit Test
• • •	
•	Run Configurations

#### The result

🕆 Package Ex 🖹 Hierarchy 🔂 🖓 🗆				
Finished after 0.028 seconds 🛛 🗢				
Runs: 2/2 🛚 Errors: 0 🖾 Failures: 1				
▼ 🗄 TestAdder [Runner: JUnit 4] (0.001 s)				
testAdd (0.000 s)				
testAddFail (0.001 s)				

# **Assert Methods**

```
assertArrayEquals()
assertTrue()
assertFalse()
assertEquals()
assertNotEquals()
assertSame()
assertNotSame()
assertNull()
assertNotNull()
fail()
```

### Annotations

After AfterClass Before BeforeClass Ignore Rule

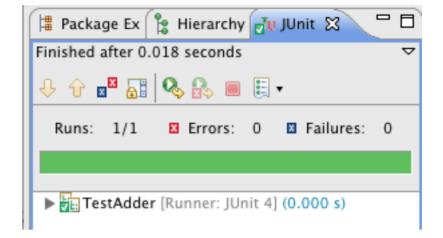

Test

# **Using Before**

import static org.junit.Assert.assertEquals; import static org.junit.Assert.assertTrue;

```
import org.junit.Before;
import org.junit.Test;
```

```
public class TestAdder {
    Adder example;
    @Before
    public void setupExample() {
        example = new Adder(3);
    }
    @Test
    public void testAdd() {
        assertEquals(4, example.add(1));
    }
}
```

}

#### Refactoring

### Refactoring

Changing the internal structure of software that changes its observable behavior

Done to make the software easier to understand and easier to modify

### When to Refactor

Rule of three

Three strikes and you refactor

#### When to Refactor

When you add a new function When you need to fix a bug When you do a code review

# When Refactoring is Hard

Databases

Changing published interfaces

Major design issues

When you add a feature to a program

If needed Refactor the program to make it easy to add the feature

Then add the feature

Before you start refactoring

Make sure that you have a solid suite of tests

Test should be self-checking

#### Do I need tests when I use my IDEs refactoring tools?

Are your IDE refactoring tools bug free?

#### Code Smells

**Duplicate Code** 

# Long Method - Large Class

The average method size should be less than 8 lines of code (LOC) for Smalltalk and 24 LOC for C++

The average number of methods per class should be less than 20

The average number of fields per class should be less than 6.

The class hierarchy nesting level should be less than 6

The average number of comment lines per method should be greater than 1

#### Long Parameter List

a.foo(12, 2, "cat", "", 19.6, x, y, classList, cutOffPoint)

# **Divergent Change**

One class is changed in different ways for different reasons

# ShotGun Surgery

When you have to make a kind of change you have to make a lot of little changes in different locations

### **Feature Envy**

A method seems more interested in a class other than the on it is in.

### **Data Clumps**

Same three or four data items together in lots of places

### **Primitive Obsession**

Using primitive types instead of creating small classes

### **Switch Statements**

How do you program without them?

#### Lazy Class

Class that is not doing enough to pay for itself

#### **Data Class**

Class with just fields and setter/getter methods

Data classes are like children.

They are okay as a starting point, but to participate as a grownup object, they need to take some responsibility

### **Inappropriate Intimacy**

Classes that spend too much time delving into other classes private parts

### **Message Chains**

location = rat.getRoom().getMaze().getLocation()

### **Negative Slope**

### **Temporary Field**

Field is only used in certain circumstances

Common case field is only used by an algorithm Don't want to pass around long parameter list Make parameter a field

### **Refused Bequest**

Subclass does not want to support all the methods of parent class

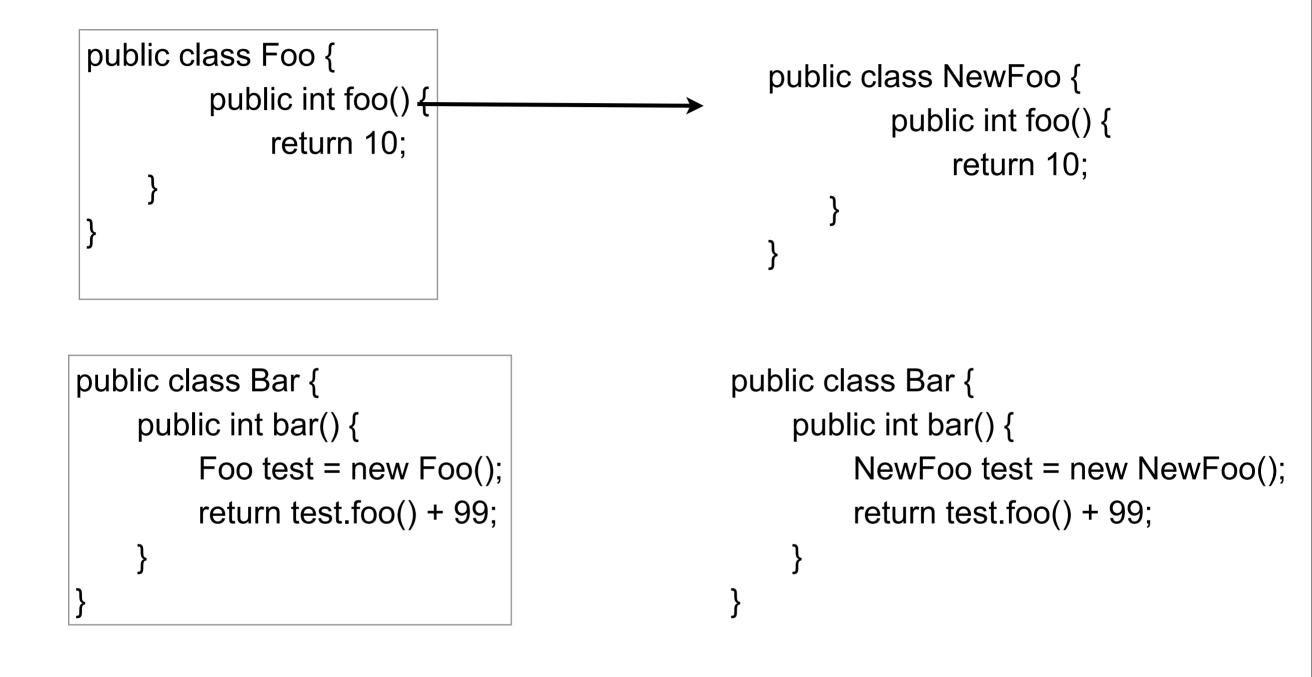

Subclass should support the interface of the parent class

### **Eclipse Refactoring**

### **Eclipse Refactoring Menu**

Rename	∵≋R

#### **Extract Class**

package edu.sdsu.cs; public class BinaryTree {	
	[ ( Find ) ) A
private BinaryTree root;	
private String value;	Categor
private BinaryTree left;	
private BinaryTree right;	
<pre>public boolean hasValue(String value) {</pre>	
<pre>return hasValue(root, value);</pre>	Be Outline 😫
}	
and the back of the Weil of Direct Tree have the interval of the	a ↓a ≥
private boolean hasValue(BinaryTree tree, String value) {	🔍 🛛 🔻 🕝 BinaryTree
<pre>if (0 == tree.value.compareTo(value))     return true;</pre>	root : B
if (-1 == tree.value.compareTo(value))	value :
return hasValue(tree.right, value);	🖉 🖉 🖉 🖉
if (0 == tree.value.compareTo(value))	🕴 😐 right : l

Writable	Smart Insert	2:1	J	

### **Refactoring Tool Issue**

People tend to only use the features they know

### **Refactoring Tool Issue**

Is a tool hard to use because I am unfamiliar with it or is it just hard to use

## **Refactoring by 41 Professional Programmers**
